World, 14 July 2008.

The comments I am publishing here are really astonishing for several point of view.

Do you know who was Nikola Tesla?

... He was the man that basically give any gadget and energy we use today from moving electricity to rivers to your home ... so the Electric company may charge you, up to cellular phones.

Physics Science honor him giving a unit, the Tesla.

$$1T = 1 \frac{V \cdot s}{m^2} = 1 \frac{N}{A \cdot m} = 1 \frac{Wb}{m^2} = 1 \frac{kg}{A \cdot s^2} = 1 \frac{kg}{C \cdot s}$$

... To give you an idea some call him, [The Man who Invented the Twentieth Century](#)

... However, here I am introducing you, some astonishing comments he made, and these comments not only offer a new perspective on Einstein mistakes but also how the energy crisis

Einstein's Relativity Theory include mistakes, comment Tesla.

is handled by few that are high-speculative like your national petroleum or electricity or Methane company.

I get this information from one of the normal incredible books that speak about him. Exactly the Lost Journal of Tesla by Swartz. Tesla die on 7 January 1943.

"When Tesla was 82, instead of speaking at a dinner party, he issued a written statement. Although this was soon after he had been struck by a car, his mind was obviously still capable of mounting an attack on Einstein's theory of relativity: I have worked out a dynamic theory of gravity in all details and hope to give his to the world very soon. It explains the causes of this force and the motions of heavenly bodies under its influence so satisfactorily that it will put an end to idle speculations and false conceptions, as that of curved space. According to the relativists, space has a tendency to curvature owing to an inherent property or resence of celestial bodies.

"Granting a semblance of reality to this fantastic idea, it is still very self-contradictory. Every action is accompanied by an equivalent reaction and he effects of the latter are directly opposite to those of the former. Supposing that the bodies act upon the surrounding space causing curvature of the same, it appears to my simple mind that the curved spaces must react on the bodies and, producing the opposite effects, straighten out the curves.

"Since action and reaction are coexistent, it follows that the supposed curvature of space is entirely impossible - However, even if it existed it would not explain the motions of the bodies as observed. Only the existence of a field of force can account for them and its assumption dispenses with space curvature. **All literature on this subject is futile and destined to oblivion** ."

It is a great pity that Tesla never published his dynamic theory of gravity. Modern thinking about gravity suggests that when a heavy object moves it emits gravitational waves that radiate at the speed of light. These gravity waves behave in similar ways to many other types of waves.

Tesla's greatest inventions were all based on the study of waves. He always considered sound, light, heat, X-rays and radio waves to be related phenomena that could be studied using the same sort of maths. His differences with Einstein suggest that he had extended this thinking to

gravity.

In the 1980s he was proved to be right. A study of energy loss in a double neutron star pulsar called PSR 1913 + 16 proved that gravity waves exist. Tesla's idea that gravity is a field effect is now taken more seriously than Einstein took it. Unfortunately, Tesla never revealed what had led him to this conclusion. He never explained his theory of gravitation to the world. The attack he made on Einstein's work was considered outrageous by the scientific establishment of the time, and only now do we have enough understanding of gravity to realize that he was right.

... I am backing here. So, do you think there will be a way to travel in your car without to listen the oil prices on your local TV or radio?

I "really" think so!

Sincerely,

Dr. Giovanni A. Orlando.
