How the Moon can power our cities? ...

Like probably you know, our beauty and naked moon control the tides. There are hundred of thousands of liters of water that move in the sea close to us.

There are actually, three countries that use the "Tidal Technology" or "Energy from Tides", and transform it in Electric Energy. They are France, Canada and UK.

Installing Marine Turbines, like in the figure:

Then the electricity is moved to an accumulator or battery and this energy can be transported. This technology is available also from 2003.

We suppose that this technology may be used to power cars and cities in the next years. We plan to work on it, shortly.
